vi) Click Next

Compatibility Check

The Compatibility Wizard has checked whether the minimum system requirements for running Premier HR have been met. The table below lists these requirements and indicates the result of the compatibility tests performed.

Administrative Privileges	
Memory must be at least 1Gb	
Operating System at least WindowsXP SP3, Server2003 SP2	
Microsoft .Net Framework 4.0	
Windows Installer 3.1	
MS SQL Server / MS SQL Server Express	
Adobe Reader	

The current system configuration meets the minimum requirements listed above

Cancel

- vii) Tick the check box then click "Upgrade"

☒ I understand that the VIP Premier Comms Service must also be updated to ensure Integrations continue running

Upgrade

- viii) The installation begins make sure no other Sage application is open

Shortcut: Service~1 | Service Configuration

How do I know the update was successful?

Once the update is complete, the latest release number will display at the top of the login screen. Alternatively, the latest release number can be found in the About section under the Help menu.

How do I know what is included in the update?

Please download and refer to the Release Notes available on the Customer Zone.

- ix) Click Finish when the application displays the below message.

Installation Result

- You have successfully completed the InstallAware Wizard for Premier HR Setup.

- x) Then access your Premier HR as usual from your desktop short cut. It's done!
